Millitech is at the forefront in production of frequency conversion systems for the next generation of Military satellites. Millitech has been awarded, and is currently producing systems for both the AEHF and Wideband Gapfiller satellites.

These major converter awards cover Army, Navy and Air Force specifications and meet all of the strict RF and environmental requirements. The systems are modular and span the complete up conversion chain to Q and Ka-band and down conversion chain from K-band. The systems include precise level control to and from an external modem. At a time when many of these potential satellite users are just defining system requirements, Millitech has already produced the conversion systems required for these applications. If needed, the existing designs can be easily modified for custom applications. The converters benefit from Millitech's experience and reputation for quality in the Military SATCOM industry. Utilization of the Millitech converters results in cost and schedule savings and substantially reduces technical risk on any new Satellite ground, mobile or airborne system.
